Well if yall just let this thread die down,... never fucking mind ill move somewhere else.

Its again just burried in garbage like "my parents this", "can i hack with ipod", fucking skids.

No offense to the ppl who actually helped me here :)

Keep me in the loop if you end up getting a list together. At some point I'm looking to have a list so I can tweak my WPA attacks by manufacturer. Tomorrow I move into a new apartment so games will continue in a new location! Hehe

Thats great news.

If course i have my own list + what ppl here kindly posted.

It is by far not enough to say anything useful yet nor make assumptions.

Wow thank you very much.

Ill update my list and post it back here as soon as i can.

Thanks again for the contributions.

Hi nice initiative i have for a long time worked with wifi/other cracking, but have just recently looked into WPS pin cracking :D nice method BtW.

Will see what i can contribute with in the future. (after holiday starting next

week). In the meantime Thx to all contributors so far!!

Note! Am currently working on a large password (wpa) database, linking back in the future.

Thank you very much.

I hope you and your gf will be alright bro.

Most of the time things work themselves out.

Hmm are we seeing any patterns here? Just wondering. I am not seeing anything yet but we could just need more data. Or could the be totally random?

[luchni](#)

07-15-2012, 05:47 PM

I noticed a kinda-sorta pattern. If you break the PIN in two sets of digits (4 and 3), a good amount of PINs have one or two equal digits contained in both sets. I'm sure it doesn't work that way, but maybe my (probably dumb) observation will be a push in the right direction for someone else.
